Product Information

The Spair offers a cost effective solution to these increasing trends. When not in use the piece is stored on the wall as a flat graphics tableau, when seating is needed its light and simple construction creates a folding chair for any occasion.

The underpinning concept behind the Spair is space conservation. In modern city living, space is a valuable entity, with more and more people buying open plan living and working environments, the need for space to be multi-functional is ever growing. The Spair is a dual functioning piece having value in both forms, as a piece of graphics and as a piece of furniture. The facias of the Spair are completely personalisable allowing versatility due to its completely flat mounted position.
